

PICKSDB

Strategic Partnership Proposal

Prepared for Ode Osbourne

April 22, 2026

This summary is written to be easy to review and discuss. It explains the current business proposal, how PicksDb makes money, and where Ode Osbourne would participate in the upside if the parties move forward together.

Document type: Business proposal summary

Status: Non-binding discussion draft

Prepared for: Ode Osbourne

Prepared by: PicksDb

Important: this is not a final legal agreement. Final equity, revenue share, vesting, and sale or IPO rights should be documented by counsel before signature.

Plain-English Deal Summary

1. What Ode Gets

Under the current proposal, Ode Osbourne would receive a meaningful ownership and upside position in PicksDb. The proposal is intended to be simple to understand:

- **10% ownership in PicksDb.** The intent is to grant Ode a ten percent (10%) ownership stake in the company, to be documented in final equity paperwork.
- **10% of company revenue.** The proposal also contemplates Ode receiving ten percent (10%) of company revenue, with the final contract defining exactly how revenue is measured and paid.
- **10% participation in a future IPO or sale.** If PicksDb is sold or goes public, the proposal is for Ode to participate at a ten percent (10%) level, subject to final legal drafting.
- **Possible additional upside for major growth.** If Ode materially helps grow the company through brand, content, or investor introductions, the parties can later discuss additional milestone-based upside.

For clarity: references to “10% equity” and “10% shareholder stock” should be treated as the same 10% ownership concept unless a final agreement explicitly says otherwise.

2. What PicksDb Will Build With Ode

PicksDb now intends to support a specific Ode Osbourne growth campaign inside the app so the partnership creates visible, trackable value instead of being only a marketing concept.

- **Public promo code: ODE.** New users can enter the public partner code ODE during signup.
- **Bonus for new users.** A user who signs up with the ODE code receives 2,500 bonus coins as a welcome reward.
- **Shareable partner link.** The code can be promoted through a direct join link and shared socially so users can enter the app with the code already attached.
- **Tracked in onboarding and admin.** The app is being configured so the promo is saved during signup, credited to the user account, and visible to administrators for campaign tracking.
- **Partner deals visibility.** The Ode campaign is designed to unlock special partner messaging and deal visibility inside the app so the promotion feels distinct from a normal invite code.

3. What PicksDb Is

PicksDb is a UFC-focused creator and community platform. It combines fight data, fan communities, creator content, predictions, messaging, and paid subscription features into one product.

4. Why This Deal Could Become Valuable

The upside is not just tied to one endorsement. If PicksDb grows paying subscribers, creator activity, Pro memberships, and overall brand reach, then the value of ownership, revenue participation, and exit participation can all grow with the company.

Business Model and Fee Summary

5. How PicksDb Makes Money Today

- **Creator subscriptions.** Creators can charge fans for premium access, predictions, picks, and related content.
- **PicksDb Pro memberships.** The app also offers Pro plans currently framed around \$9.99 monthly, \$99.99 yearly, and \$199.99 lifetime, subject to change.
- **Eligible creator fee waivers.** In some cases, Pro creators may have the PicksDb platform portion waived while processor fees still apply.

6. Current Subscription Fee Structure

- **Stripe processing fee.** 2.9% of the payment plus \$0.30 per transaction.
- **PicksDb platform fee.** Currently modeled to mirror the Stripe fee formula and tracked separately for accounting.
- **Special pricing band.** For monthly subscription prices between \$4.99 and \$9.99, the Stripe and platform fee dollar amounts are held to the same dollar amounts as a \$4.99 charge.
- **Paid pricing floor.** Paid creator subscriptions are generally set with a minimum of \$4.99 per month, while a free tier may still exist at \$0.

7. Simple Subscription Example

If a fan pays \$9.99 per month to a creator under the current fee configuration, the system holds the fee dollars to the \$4.99 tier amount within that pricing band. That works out to about \$0.44 to Stripe, about \$0.44 to PicksDb, and about \$9.11 credited to the creator before any separate waivers or adjustments.

8. Withdrawal and Payout Fees

- **Under \$5 withdrawn.** \$0.25 Stripe-side fee plus \$0.25 platform fee, for a total of \$0.50.
- **\$5 or more withdrawn.** \$0.25 platform fee under the current standard payout configuration.
- **Instant payout.** 1.5% total fee, with a \$0.50 minimum.
- **Minimum threshold.** Partial withdrawals are generally subject to a \$4.99 minimum, while full balance cash-outs may be allowed from lower amounts if the net amount still clears payout rules.

9. Proposed Vesting Schedule

Because the proposal includes long-term ownership economics, the equity portion should vest over time so both sides stay aligned. A simple founder-friendly and partner-friendly draft schedule would be:

- **Total equity subject to vesting.** The 10% equity grant would vest rather than becoming fully earned on day one.
- **Term: 4 years.** The equity would vest over a forty-eight (48) month period starting on the effective date of the final agreement.
- **12-month cliff.** No equity vests before month 12. At the 12-month mark, 25% of the total grant vests if Ode is still actively performing under the agreement.
- **Monthly vesting after the cliff.** The remaining 75% would vest in equal monthly installments over the following 36 months.
- **Good-faith performance condition.** Continued vesting should remain tied to ongoing partnership support, promotion, and other obligations defined in the final agreement.
- **Change-of-control discussion point.** The parties may negotiate partial or full acceleration if the company is sold while Ode is actively involved, but that should be expressly written into the final deal documents.

10. Legal Structuring Notes

- **Ownership terms.** Final documents should clearly define vesting, dilution, transfer restrictions, and cap table treatment.
- **Revenue share terms.** The agreement should clearly define whether revenue means gross or net, how often payments are made, and what exclusions apply.
- **Sale / IPO terms.** The documents should state whether sale or IPO participation is already covered by the ownership stake

or whether there is an additional separate benefit.

11. Recommended Next Step

If the proposal is directionally acceptable, the next step should be a short formal term sheet and then definitive legal documents covering equity, revenue share, and sale or IPO rights.

Discussion Acknowledgment

This page is included for convenience if the parties want to acknowledge receipt of this proposal summary. It is not intended to be a binding agreement by itself.
